

## Print out of the box

 [DOWNLOAD ADAPTER](#)

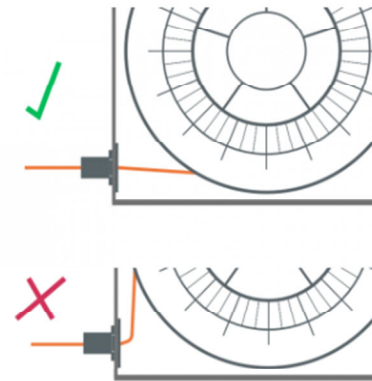

### Print

Download and print the small adapter on your 3D printer. The adapter has a opening for a piece of a kitchen sponge to clean the filament.

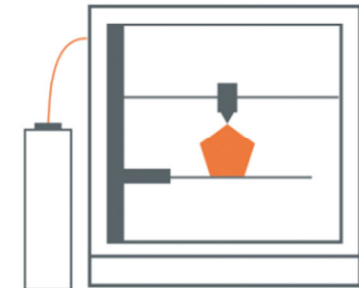

### Place

Place the adapter through the hexagon shaped cutout on the side of the box. Press firmly to secure the adapter by snapping it in place.

### Guide

Direct the filament through the adapter. Pay attention to the correct guiding to enable a smooth unwinding of the filament.

### Done

Place the box upside down so the filament goes straight upwards and load the filament into your 3D printer as usual
